EXPERIENCE

Digital Operations Manager | Vital Flow Health (*Early-stage healthcare startup*) Jul 2025 – Aug 2026

- Engineered an internal tool which automated report generation for clients, reducing manual work for our team by 60% and significantly improving customer experience
- Developed a web-based application to allow users to interpret 94 different metrics from their blood test results, designing the underlying data models, UI design, and API integration from scratch
- Completed data protection training to ensure 100% compliance when handling confidential patient data
- Designed and built 2 websites (Vital Flow Health and Vital Flow Training), and delivered Salesforce administration for the whole organisation
- Acted as the primary on-site liaison between the clinical team and corporate clients, managing appointment logistics and building client relationships

Analyst | The Distilled Group (*Early-stage corporate finance/strategic advisory firm*) Sep 2025 – Mar 2026

- Conducted market and investor research to identify and prioritise 150+ funding partners for clean energy and sustainability projects
- Authored investment teasers and marketing materials, and structured content for the company’s website launch

TECHNICAL PROJECTS & RESEARCH

SQL Analytics Portfolio – Chinook Database | github.com/tobiasdroy/sql-portfolio-1, sql-portfolio-2

- Wrote 11 SQL queries (SQLite) answering ad hoc business questions on revenue, customer value and catalogue mix, using multi-table joins, CTEs, window functions, HAVING, CASE WHEN segmentation and date arithmetic
- Built a retention analysis that ranked top customers per country and labelled each by purchase frequency and time since last order, separating loyal buyers from lapsing ones

Masters Project – AI in Football | City Football Group (CFG) Sep 2024 – Jun 2025

- Analysed complex, confidential Premier League match datasets using Python, PyTorch & Databricks, collaborating with CFG’s data team throughout
- Designed and trained a neural network inspired by U-Net to predict defending players’ positions to within an accuracy of 3 m, using only the positions of attacking players as input
- Presented findings to CFG’s data science team at the Etihad Stadium; project awarded 79%
- Managed a two-person collaboration, resolving technical and interpersonal challenges to deliver the project on time, despite limited resources

EDUCATION

MPhys Physics (2:1) | University of Manchester Sep 2021 – Jun 2025

- Built Python and C++ programs to analyse experimental physics data, receiving first-class grades across all assessed coding projects
- Simulated physical phenomena including radioactive decay and neutron scattering, requiring statistical modelling, numerical methods, and object-oriented programming

Hampton School Sep 2014 – Jun 2021

- Pre-U:** Maths [D1], Further Maths [D1], Physics [D1], Chemistry [D1], **GCSE:** 9 A*s, 1 A
(D1 is equivalent to a high A* at A-level)

SKILLS

Languages SQL, Python (primary), C++

Data Data analysis and visualisation, statistical modelling, Databricks, neural network design and training

INTERESTS & ACTIVITIES

Choral singing Performed at the Royal Albert Hall and St Paul’s Cathedral; represented the UK as one of 13 elite singers invited to perform at the Chinese University of Hong Kong’s 60th anniversary celebrations

Music Performed guitar, jazz, and electric bass in both live and recorded rock and jazz bands
